Perfect by nature

Perfect by technology

A lifetime dedicated to pasta, always ahead in everything.
ICC-AISTEC 2015 conference on grains for feeding the world

On the occasion of the World Expo 2015 in Milan (Italy), a major global event, the Italian Association for Cereal Science and Technology (AISTEC) and the International Association for Cereal Science and Technology (ICC) have joined forces to co-organize an international conference on a very important topic “Grains for feeding the world” to reflect on the EXPO 2015 themes themselves which are “Feeding the planet. Energy for life” within the boundaries of the grains field.

Grains such as cereals and pseudocereals are at the base of the human diet and an economic asset worldwide. The aim of the conference is to address major global challenges such as limited agricultural land and resource scarcity, infrastructure and biodiversity, pressures of a changing climate, innovation in production and technology, health and nutrition and consumers needs to shape the future of grains with an international perspective.

The conference aims at attracting a diversified audience made up of researchers and academia, industry representatives, legislators and stakeholders in general. The main conference will be hosted at the seat of the University of Milan, right in the centre Milan and next door to the famous cathedral from July 1 to 3, 2015, and connections are foreseen with the World Expo 2015 premises.
